

# Smart Outdoor Lighting Alliance

**DO YOU** want to make sure that your community's new LED streetlighting maximizes energy savings and improves lighting quality at the same time? The Smart Outdoor Lighting Alliance Community Friendly Lighting Program was developed for you.

The Community Friendly Lighting (CFL) program promotes public lighting that enhances the character and ambiance of communities by eliminating glare, light trespass, and skyglow while improving visibility and visual comfort. It can be done, it just requires using available research and new technology intelligently.

SOLA is working with cities to raise awareness of these issues through education and *pro bono* design assistance.

Community Friendly  
Outdoor Lighting Program

The future of  
outdoor lighting today

**SOLA** fills the gap between the public and those who are tasked with providing streetlighting to the community. City and public utility staff must focus on safety, standards and reducing costs and residents want to live in a warm inviting community with lighting that enhances their lives and their neighborhoods. We can help establish the crucial dialog that results in lighting that meets everyone's needs.

Quality public lighting starts with lighting design that balances the needs of all stakeholders. The CFL program emphasizes the need for community outreach and involvement by conducting public meetings, pilot testing, walking tours, and surveys.

Visit SOLA online for more details and contact us to help make your streetlighting upgrade a success for everyone.
